

Week 4 : Practice Assignment 4

Your last recorded submission was on 2026-02-07, 11:23 IST

Note : This assignment is only for practice purpose and it will not be counted towards the Final score

1) Which of the following functions can be used to split the data into train and test? **1 point**

- ☐ pandas.train_test_split()
- ☐ numpy.train_test_split()
- ☒ sklearn.model_selection.train_test_split()
- ☐ sklearn.train_test_split()

Yes, the answer is correct.

Score: 1

Accepted Answers:

`sklearn.model_selection.train_test_split()`

2) The function used to perform k-Nearest Neighbors classification is: -

1 point

- ☐ sklearn.KNN
- ☐ sklearn.KNearestClassifier
- ☒ sklearn.neighbors.KNeighborsClassifier()
- ☐ sklearn.neighbors.KNeighborsRegressor()

Yes, the answer is correct.

Score: 1

Accepted Answers:

`sklearn.neighbors.KNeighborsClassifier()`

3) A Linear Regression model is said to be good **1 point**
when the **R-squared** value tends to

- ☐ 0
- ☒ 1
- ☐ -1
- ☐ 0.5

Yes, the answer is correct.

Score: 1

Accepted Answers:

1

4) The Gini coefficient ranges from **1 point**

- ☒ 0 to 1
- ☐ -1 to 0
- ☐ -1 to 1
- ☐ None of the above

Yes, the answer is correct.

Score: 1

Accepted Answers:

0 to 1

5) What is heteroscedasticity as used to assess a **1 point**
Linear Regression model?

- ☒ Linear regression with varying error terms
- ☐ Linear regression with constant error terms
- ☐ Linear regression with no error terms
- ☐ All the above

Yes, the answer is correct.

Score: 1

Accepted Answers:

Linear regression with varying error terms
